ZESBI Installation Partner Intake Form

ZESBI Installation Partner Requirements

Zero-Emission School Bus and Infrastructure (ZESBI) Staff maintain a list of Installation Partners who can assist in the completion of a ZEV infrastructure construction project. **Please note an Applicant or Incentive Recipient is not required to select a vetted ZESBI Installation Partner to perform installation work onsite; the ZESBI Installation Partner List is intended to be a helpful resource.** All Installation Partners must complete this ZESBI Installation Partner Intake Form to request that they be added to the online [ZESBI Installation Partners List](#) hosted on the [ZESBI webpage](#). To be considered, Installation Partners must have submitted all required documentation and filled in every field within this form. While you may find more detailed requirements for all Applicant selected installation partners in section 7.4 of the [California Energy Commission's \(CEC's\) ZESBI Implementation Manual](#) (IM), you may find summarized requirements below:

Requirements for All Installation Partners

1. Must conform to the most recent versions of California Code of Regulations (CCR) Titles 4 and 24, National Fire Protection Association (NFPA) electric codes or standards imposed by the Planning Department having jurisdiction, and California Health and Safety Code Section 25510(a).
2. Must meet prevailing wage requirements. See Chapter 1 of Part 7 of Division 2 of the California Labor Code.
3. Must comply with all applicable laws, ordinances, regulations, and standards; all federal, state, and local electrical and building codes for construction; and all ADA codes.
4. Must have secured all required state, local, county, and city permits to build and install eligible infrastructure.
5. Must ensure that pricing for services involved in the completion of infrastructure is reasonable and reflects current market rates.
6. Must comply with California Public Utilities Code (PUC) section 740.20 requiring all EV charging infrastructure and equipment located on the customer side of the electrical meter be installed by a contractor with the appropriate license classification, as determined by CSLB, and at least one member of the crew onsite, at any given time, who holds an Electric Vehicle Infrastructure Training Program (EVITP) certification. Projects that include installation of a charging port supplying 25kW or more to a vehicle must have at least 25 percent of the total electricians working on the crew for the project, at any given time, who hold EVITP certification.
