

EVSE Redemption Guidance

Effective October 25, 2019, EVSE voucher enhancements can no longer be requested, even if the purchaser has an approved vehicle voucher.

To support adoption of electric vehicles by reducing infrastructure costs, an EVSE voucher enhancement of up to \$30,000 per vehicle voucher was available. Vouchers were approved on a case-by-case basis.

The EVSE Voucher Enhancement can be applied to hardware costs, load management software for smart charging, and energy storage.

The voucher enhancement does not cover labor or utility upgrade costs.

This voucher enhancement can be combined with any other funding source, not to exceed 100% of total capital cost.

The voucher enhancement is available for accompanying vehicle vouchers requested on or after December 15, 2017, for which associated infrastructure has not yet been purchased.

In the case of multiple vehicle voucher requests at the same location — that is owned / controlled by the fleet — associated EVSE voucher enhancements could be combined to cover an overall EVSE equipment budget.

After submitting your request, you were asked to supply 1) copy of purchase invoice and 2) list of other sources of public funding, to ensure HVIP is not co-funding beyond the real costs of the qualifying EVSE, load management software, and energy storage.

How to Redeem:

To redeem an EVSE Infrastructure voucher, contact nestor.loza@tetrattech.com to receive the required form and instructions.

EVSE Infrastructure vouchers should have been requested after the corresponding vehicle voucher requests were submitted and before the EVSE Infrastructure has been ordered.

Final incurred cost is reimbursed when the installation is complete.
